# GUI for Parity Game

automate the chores
focus on what really matters

Parity game is a logic game played on a directed graph. Research about algorithms on parity game requires frequent editing of the game. Without a GUI, it's hard to edit the game, and no visual aid is available to the researcher.

With the GUI at hand, editing parity game in files is the past. You can intuitively edit the game within a few clicks, furthermore, you can visually see the steps of a algorithm, and extend it for other graph algorithm research.
